

# Hearing Conservation

## Benefits to the employer

- Measures noise levels in the workplace so that the employer knows what controls to implement to protect employees' ability to hear
- Provides OSHA compliant program with proper documentation
- Protects the employer, should a Workers Comp hearing loss claim be brought by an employee and helps determine compensability of the injury.
- Provides annual audiograms to determine any significant hearing loss from year to year conducted at the worksite
- Integration of prior testing into our system for continuity of results

## Who needs this service

Workplaces where noise monitoring has shown a need for hearing conservation program as required by OSHA. Industries where the need is greatest are mining, construction, heavy industrial and manufacturing, auto repair garages, and more.

## Program features

- Noise monitoring, individual or areas conducted with state of the art dosimeters
- Comprehensive OSHA compliant Hearing Conservation Program
- Annual Audiograms for all employees conducted at the workplace with Benson audiometers in a mobile trailer capable of testing four persons at a time
- Certified Occupational Hearing Conservationists (COHC) on staff
- Audiologist reviewed results and a comprehensive report to the employer in paper or electronic form

## Cost

Per project, location or included within a monthly retainer agreement.
